CASE STUDY OVERVIEW

INITIAL PROBLEM

Based in London, this home's original black timber windows had rotted due to many years of natural weathering. The homeowners wanted replacement windows that would match their existing sightlines but provide modern thermal performance, save them maintenance costs in the future and enhance security.

PRODUCT SPECIFIED & INSTALLED

Because of this, the homeowners explored the timber alternative UPVC option and found our Heritage Rose sash window. Heritage Rose provides A rated thermal efficiency and modern security levels as standard, but can achieve the slim, authentic sightlines traditional to the original sashes. Using our in-house spray shop we were able to replicate the home's original sashes by spraying them black with a woodgrain textured finish. Even with a coloured finish, the homeowners can enjoy maintenance free benefits without the worry of future restoration costs.

CASE STUDY OVERVIEW

SOLUTION & FINAL OUTCOME

The windows were finished with a singular vertical astragal bar configuration to match the victorian period styling of the property and a traditional deep bottom rail. The homeowners would also continue to save money for years to come on heating and maintenance bills.
